Andrei Dumitrescu

Full Stack Software Engineer | Java, Spring Boot, React, TypeScript, Node.js

Timișoara, România · +40 751 057 333 · andrei.dumitrescu100801@gmail.com · linkedin.com/in/andrei-d-b75615207

EU citizen · Remote (EU) or Timișoara · Available immediately

Professional Summary

Java-first full stack engineer with 4 years of experience: 3 years of enterprise Java/Spring Boot at Ness (microservices, Kafka, REST/SOAP, CI/CD; fraud/AML, logistics), then 1 year as technical lead on a production AI companion app built full stack in TypeScript/Node.js, React and PostgreSQL (2,800+ users).

Technical Skills

- **Languages:** Java, TypeScript, JavaScript, SQL
- **Backend & APIs:** Spring Boot, Node.js, Deno, REST/SOAP API design, Hibernate/JPA, Kafka, WebSockets, async job queues, BPM/BPMN 2.0
- **Frontend & Mobile:** React, Vite, Tailwind, Capacitor (iOS/Android)
- **Databases:** PostgreSQL, Supabase, MSSQL, Oracle, MongoDB
- **Cloud & DevOps:** Docker, Kubernetes, AWS (EC2, S3, Lambda), GitHub Actions, Jenkins, SonarQube, Nexus, Azure DevOps, Linux
- **Testing:** JUnit 5, Mockito, Rest Assured, Vitest, Maestro, Selenium, Cucumber
- **AI & Integrations:** OpenAI, Whisper, ElevenLabs, RevenueCat, PostHog, OneSignal
- **AI-Assisted Tools:** Claude Code, Cursor
- **Engineering Practices:** Object-Oriented Design, Code Reviews, Unit & Integration Testing, CI/CD, Agile/Scrum, Root Cause Analysis, Production Support

Experience

Technical Lead, ZettaSource

07.2025 – 09.2026 · TypeScript, Node.js/Deno, Supabase/PostgreSQL, React, Capacitor, RevenueCat, GitHub Actions

- Bootstrapped product studio; delivered an AI companion app (iOS/Android) end to end for a client
- Led a team of 2 engineers from architecture to store release: set technical direction, split the design into tasks and held quality through code review
- Designed and built the backend: 80+ TypeScript edge functions with REST endpoints, row-level security, Apple/Google/Meta SSO, signed URLs, pg_cron jobs and WebSocket streaming chat, serving 2,800+ registered users
- Designed the data model and retry-safe async job queues around the LLM services (OpenAI, Whisper, ElevenLabs), handling 15,000+ conversations and 95,000+ messages; eliminated duplicate chat replies with a unique index and conflict handler
- Implemented subscriptions, paywalls and an in-app coin economy with RevenueCat, reaching ~3.5% free-to-paid conversion
- Built the release pipeline on GitHub Actions (lint, type checks, sharded tests, migration checks, iOS/Android builds, auto-deploy) with 470+ Vitest test files and Maestro E2E flows: ~10 reverts across 450+ PRs
- Added operational safety without a dedicated SRE: feature-flag kill switches, OTA live updates, scheduled health checks on AI-service failure rates and revenue/refunds, PostHog analytics and GDPR deletion
- Built the React/Vite/Tailwind client with Capacitor (one codebase for both stores) and owned App Store and Google Play releases

Software Engineer (Freelance, part-time), ZettaSource

06.2024 – 07.2025 · Shopify, WooCommerce, JavaScript

- Built and maintained 8 e-commerce storefronts for 3 clients, alongside a full-time role
- Automated inventory and price monitoring, saving ~10 hours/week of manual work

Software Engineer, Ness Digital Engineering

02.2024 – 07.2025 · Java, Spring Boot, BPMN 2.0, REST/SOAP, MSSQL, Oracle, Selenium, Cucumber

- Implemented business rules and integrations in Java/Spring Boot on an IBM BAW-type BPM platform for a fraud and anti-money-laundering solution (NICE Actimize)
- Tested releases in staging environments and fixed defects across BPM processes and REST/SOAP integrations
- Cut regression time from 8–10 hours to ~6 hours for a US client by refactoring automated suites in Java, Selenium and Cucumber; kept scenarios aligned with new releases and reported defects from failed runs

Junior Software Engineer, Ness Digital Engineering

03.2023 – 02.2024 · Java, Spring Boot, Hibernate/JPA, Kafka, Jenkins/Groovy, Docker, Kubernetes

- Delivered ~5 new backend microservices and contributed to 15+ on a maritime freight-exchange platform (bids, vessel positions)
- Built and maintained 4 CI/CD pipelines in Jenkins/Groovy: automated version updates and git tagging with jgitver, and investigated build and deploy failures on Docker, Kubernetes, SonarQube and Nexus

Software Engineer Trainee, Ness Digital Engineering

07.2022 – 03.2023 · Java, MongoDB, JUnit 5, Mockito, Rest Assured

- Built a full-stack tourism web app for Timișoara with Traian Vuia International Airport, promoted through QR codes displayed in the airport: ~200 weekly visitors

Professional Skills

- Technical leadership and end-to-end ownership
- Architectural decision-making and stack selection
- Turning business requirements into technical specs and estimates
- Code reviews and guiding engineers on best practices
- Production reliability: rollbacks, feature flags, monitoring and root cause analysis
- AI-enhanced development workflow with review and verification of AI-generated code

Education

- Bachelor's Degree in Computer Science, West University of Timișoara, 2020 – 2023

Languages

- Romanian: Native
- English: Professional working proficiency (C1)

Additional

- Security labs: PortSwigger Web Security Academy, TryHackMe, Hack The Box
